Marin de Montbel

Company Name

Total Solar Distributed Generation Middle East

My activity in 4 words:

1. Renewable energy
2. Accessibility for all
3. Technical expertise
4. Sustainability

My background and what I can bring to the FBC services and activities:

In the past 15 years, I've had the opportunity to work across different branches of Total in countries around the world. I've learned to adapt my approach towards clients from different backgrounds and have introduced them to the French culture and expertise. This is the exact principle that I have maintained when I arrived in the Middle East.

Now, my focus is to raise awareness regarding the fact that there are renewable energy solutions in the region available for anyone who wants to transition to solar energy. The current strategy that I am applying to my team in Dubai is to focus on making renewable energy more accessible to smaller businesses who want to make the initiative to follow a "Green Energy" path. We hope to share this knowledge with the French business community.

My added value in the Board:

One of the main missions of my work in the Middle East is to spread awareness and educate people about renewable energy. In order to this, we've established a team of dedicated solar experts in the past two years who are spreading this message and reaching out to anyone who might be interested by becoming more aware and sustainable in the Middle East.

As a company that's a major player in the renewable sector, it is our duty to help smaller businesses in the region so they can succeed in their initiative to become more sustainable by using renewable energy.

I want to demystify the renewable energy industry and to show that there are various ways to be more sustainable (i.e. solar energy, wind energy, EV chargers, energy efficiency, etc.)

Why you should vote for me:

As a dad, I believe it is essential for the future of our kids that we accelerate the energy transition towards a more sustainable future while using today's renewable energy solutions. It is essential that we reduce our carbon emissions in order to guarantee a more sustainable future for the younger generations to come.

To become part of the board would be a great opportunity to give you a better insight on this topic, raise awareness and advise any French company on how they could move towards a sustainable future while using today's renewable energy solutions.
